

Color Efex Pro™ 3.0 Lesson

New Filter: Glamour Glow

The Glamour Glow filter gives photographers a powerful way to stylize images with a soft and dream-like effect that is popular and seen in many of today's contemporary photographs.

Color Efex Pro™ 3.0 Lesson

New Filter: Glamour Glow

To apply the Glamour Glow filter to the image, click on Glamour Glow from the Selective Tool or open Color Efex Pro 3.0 from the Filter menu and then select the Glamour Glow filter from the Filter List on the left.

Tip: Once inside the Color Efex Pro 3.0 interface, you can hide the Filter List by simply clicking on the Show Image Only button located at the top left corner of the interface (Fig. 1). Clicking on this will provide more room to work with an image.

To modify or adjust the application of this filter on the image, go to the filter control area. In the filter control area (Fig. 2), there are three types of Controls: Glow, Saturation, and Glow Temperature.

Glow – Control the degree of the filter’s softening technique. Move the slider right to left to apply the desired amount of softening effect to the image.

Saturation – Control the color strength in the image. Move the slider right to left to apply the desired level of color, light to dark in the image.

Glow Temperature – Control the temperature of the effect added to the image. Moving this slider to the right creates a warm red-orange effect, while moving the slider to the left creates a more cool blue effect.

To see a before and after effect on the image, click on and off the Preview checkbox (Fig. 3) or you can select different View Modes to see a side-by-side preview or a split view of the filter effect applied to the image.

Once the optimum adjustments have been made using the filter controls, you may simply click on the OK button (Fig. 4) at the bottom of the interface and the filter will be applied globally throughout the image.
